SUMMARY

Unity developer with 6 years building and shipping live mobile and WebGL games in C# at a professional studio. Lead client engineer on a long-running multiplayer life-simulation MMO, alongside independently shipping complete titles end-to-end to Google Play and the App Store. Strong in gameplay systems, real-time multiplayer (Nakama), live-ops feature delivery, and performance/stability optimization. Comfortable owning a project solo, leading a system, or working within a larger team.

SKILLS

Engine & Language: Unity (2019 – Unity 6), C#, Object-Oriented Programming

Gameplay & Systems: Game architecture, core gameplay systems, UGUI, Spine 2D, data-driven level generation, physics-based mechanics

Design Patterns: Singleton, Observer, State, Object Pooling

Multiplayer & Services: Nakama (real-time multiplayer), Firebase (analytics, remote config), Unity Addressables

Platforms & Release: Android & iOS (Google Play Console, App Store Connect via Xcode), WebGL build & deployment

Tools: Git, GitHub, SourceTree, Visual Studio, Trello

AI-Assisted Development: Claude Code with the Unity-MCP plugin (Model Context Protocol) for implementation, debugging, and testing directly in the Unity Editor

EXPERIENCE

Varisoft Co., Ltd. — Unity Game Developer

Bangkok, Thailand | Aug 2020 – Present

- Lead client engineer on ZabbWorld: Secret Stories, a large-scale online social / life-simulation MMO, across 5+ continuous years — designed the core architecture, the real-time multiplayer system on Nakama, and the avatar pipeline (10,000+ customization options); own the largest share of the codebase across gameplay, housing/world-building, live-ops events, and the economy.
- Independently developed and shipped multiple complete titles end-to-end across mobile and WebGL, owning architecture, gameplay, performance, and store deployment.
- Took over a multiplayer project from a departing developer and led it through stabilization and final development to launch on Google Play.
- Provided live-ops on Pakapow: Friendship Never Ends, a published board-game RPG — fixing bugs, improving stability, adding new content, and managing store update builds.
- Improved stability and performance across live games by reducing crashes and memory usage and smoothing frame performance, and independently investigated and resolved complex production bugs.
- Built and own multiple live-ops systems end-to-end on a newer mobile title (Dream Runner X) — the mail system (full data/state/UI layer), the shop and in-app purchase stack, and a gachapon feature.
- Mentored interns on practical, hands-on development workflow.

SELECTED PROJECTS

ZabbWorld: Secret Stories — Large-scale online social / life-simulation MMO (Android / iOS) featuring avatar customization, careers, crafting, home decoration, and social activities. Lead client engineer — core architecture, Nakama real-time multiplayer, avatar pipeline (10,000+ options), live-ops events, and the economy, maintained across multiple Unity versions through Unity 6.

Pakapow: Friendship Never Ends — Single-player board-game RPG (Android / iOS). Live-ops — stability, bug fixing, and new content.

Once Pro Shoot — Branded promotional WebGL shooter. Sole developer — full technical implementation and web performance optimization.

Meow Meow Rescue — Casual physics puzzle (WebGL). Sole developer — custom physics-based collapse system and full game loop.

Open-Source Unity Packages (UPM) — Reusable Unity tooling under the KidzDev brand — Addressables toolkit (ref-counted loading, pooling, typed refs), recyclable uGUI ScrollRect, responsive UI sizing, and C# extensions. github.com/knabsiraphop

EDUCATION

Chiang Mai University — Bachelor of Engineering, Computer Engineering

2016 – 2020

LANGUAGES

Thai (native) • English (professional reading & writing; basic spoken)
